

Cedar | Release notes

EXTERNAL TESTFLIGHT October 31, 2026

Version 1.0.0

Build 80

Cedar Server brings the Home DVR to a NAS, mini PC or Raspberry Pi, so recordings keep running with no Mac and every app closed. Recordings get a new page with what's recording now, recent recordings and a grid of shows. Watch Together keeps playback in sync on a FaceTime call, and trailer previews play behind the Home hero from a trailer Tobacco Tie. On iPhone and iPad, a new Apple control layout matches the look of Apple's TV app.

1 Highlights

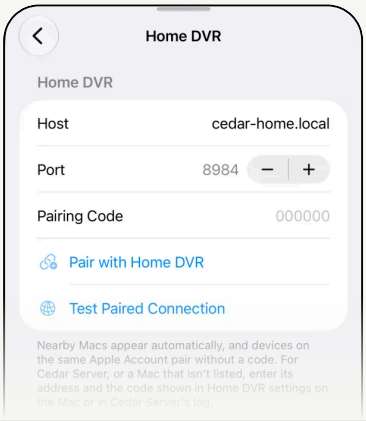

4 new, 1 improved

+ NEW

Cedar Server

Pair Cedar with the free Cedar Server container on a NAS, mini PC or Raspberry Pi. Cedar sends it your Live TV sources and guides, and recordings run with every app closed.

iPhone iPad Apple TV

↗ IMPROVED

Recordings

A new Recordings page with Recording Now, Recent and a Shows grid, plus a Recordings Branch in Library. Watch Live joins a recording in progress just behind live.

+ NEW

Watch Together

On a FaceTime call, play a title for everyone and keep it in sync. Pick the name others see in Settings › Playback.

+ NEW

Trailer previews

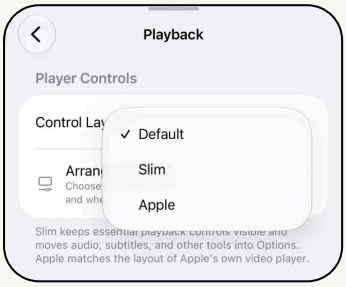

Add a trailer Tobacco Tie such as Trailerio and trailers play muted behind the Home hero, with a mute button.

NEW

Apple control layout

Choose Apple in Settings › Playback › Player Controls › Control Layout for large glass buttons, a volume control, and Info, Episodes and Continue Watching pills.

iPhone iPad

Settings › Playback › Player Controls on iPhone.

2 Home and Search

5 new, 3 improved

People in Search

NEW

Search shows actors and directors in their own rail. It’s hidden on Kids profiles.

Search results

IMPROVED

Up to 40 results with exact title matches first, so regional versions of a show are no longer cut off.

Search rails

IMPROVED

Results scroll sideways in rails instead of a tall grid.

iPad Mac

Branch Group art

IMPROVED

Portrait and Square Branch Groups show service and studio artwork with the logo, and portraits for people, instead of cropped lettering.

Long seasons

NEW

Seasons with more than 150 episodes split into 100-episode ranges you can jump between.

Reset Progress

+ NEW

Cards with a partial progress bar offer Reset Progress. Your watch history stays.

Read Synopsis from the hero

+ NEW

Hold Select on the hero's Go to button and choose Read Synopsis.

Apple TV

Mac hover previews

+ NEW

Rest the pointer on a poster to see its trailer in a floating card.

Mac

3 Playback and sources

4 improved

Source Settings

↗ IMPROVED

Requirements now apply in Automatic mode too, resolutions and release types are single menus, and the Sorting Preset offers Custom.

Start Streams Early

↗ IMPROVED

Replaces the old preload option and also warms the stream saved by Reuse Last Link.

Seeking

↗ IMPROVED

The timeline jumps to where you seeked and shows a spinner straight away, and repeated skips add up.

Player polish

↗ IMPROVED

The Next Episode pill stays at the bottom and the post-play tile shows only the video.

Mac

4 Live TV and DVR

2 new

Recordable Sources

+ NEW

Choose which Live TV sources Cedar Server can record from.

iPhone iPad Apple TV

Refresh Progress

+ NEW

Settings › Notifications can hide the source and guide refresh pop-up on this device. Failed refreshes still show.

5 Connections and tracking

3 new, 2 improved

Silo playback

+ NEW

Silo servers play their copies, with progress and watched state kept in sync both ways.

Requests

+ NEW

Seerr gains Quick Connect and a Requested state that avoids duplicate requests. Silo servers can take requests too.

Tobacco Tie switches

+ NEW

Each installed Tobacco Tie has an on/off switch in Settings, so you can keep it without using it.

iPhone iPad Mac

Catalog links

↗ IMPROVED

AIOMetadata and other catalog links load whole catalogs, import anime lists and answer Search.

MDBList

↗ IMPROVED

The Upcoming calendar fills again, and episodes released today show Out Today.

6 Fixes

7 fixed

- ✓ Seerr sign-in works again.
- ✓ A phone call no longer leaves the movie frozen when you return. **iPhone, iPad**
- ✓ 4K60 and HDR live channels no longer stall, and live HEVC uses hardware decoding.
- ✓ Branches inside folders no longer reload when you scroll back to them.
- ✓ Streaming folder Branches with nothing to show are hidden instead of saying No Titles.
- ✓ Subtitle language menus in the player no longer flicker. **Mac**
- ✓ Subtitle libraries include FreeType, FriBidi and HarfBuzz security fixes.

7 Known issues

3 known issues

- Picture adjustments don’t apply to 4K60 or HDR live channels, so those channels keep playing smoothly.
- The player’s episode list still shows long seasons in full. Use the title page to jump by range.
- Cedar for Mac can host its own Home DVR but can’t use Cedar Server yet. **Mac**
